

# FRAZIER

## CAT™ 46

### **Features**

- **Complete Coaxial Extended Range Loudspeaker**
- **Controlled Directivity (90°x90°)**
- **Power Handling - 250 Watts A.E.S.**
- **Ferrofluid Cooled High Frequency Unit**

### **Factory Options**

- **Oak, Walnut or White Finish**
- **Through Rod Suspension**
- **Transformer**

The Frazier CAT 46 is a general purpose full range controlled directivity loudspeaker designed for music and speech reproduction in small to medium size churches, auditoriums and theaters and for use as a monitor in recording and broadcast applications. The CAT 46 consists of two subsystems in a single enclosure. The primary subsystem consists of a controlled directivity radiator with a heavy duty 8" cone type midrange transducer in a 90 x 90 conic horn. A 2" x 6" high frequency horn with a ferrofluid cooled driver is centrally placed in the midrange horn. The secondary subsystem consists of a heavy duty 12" woofer. It's well controlled directional behavior, sonic accuracy, and compact dimensions simplify sound system design and installation.
